

3D model of the cell

The next page contains a 3D model of the cell.

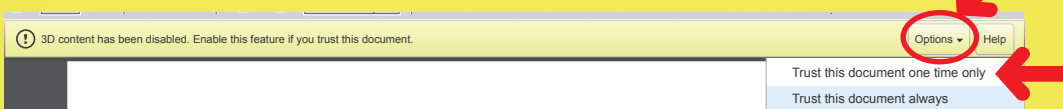

Please follow the steps below to be able to see the 3D model in the PDF file:

1 You need the Adobe Acrobat Reader. (Opening in a web-browser does not work.)

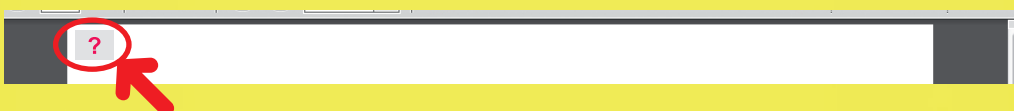

2 Download the PDF from a web browser to your computer.

3 If you see a blank page, click on it to activate it. The following message should show up. Select: Trust this document one time only.

4 If nothing happens, a red question mark in a grey square sign may appear in a top left corner. Then click on it and the 3D model will show up.

5 With this control bar you can change the view and the lighting of the model. It is suggested to change the view to **perspective** and lighting to **bright lights** to have the most realistic model of the real cell. You can rotate and zoom the model by using your mouse or a touchpad etc.
