

3D model of the cell

The next page contains a 3D model of the cell.

Please follow the steps below to be able to see the 3D model in the PDF file:

- You need the Adobe Acrobat Reader. (Opening in a web-browser does not work.)
- Download the PDF from a web browser to your computer.

If you see a blank page, click on it to activate it. The following message should show up. Select: Trust this document one time only.

If nothing happens, a red question mark in a grey square sign may appear in a top left corner. Then click on it and the 3D model will show up.

With this control bar you can change the view and the lighting of the model. It is suggested to change the view to **perspective** and lighting **to bright lights** to have the most realistic model of the real cell. You can rotate and zoom the model by using your mouse or a touchpad etc.
